LABS Content(LAB - 8)

Due: November 25, 2022 @ 11:59 pm

Weight: 2% of your final grade

Requirements:

Create a shape using CSS (you can create any kind of shape as long as it's noticeable when it spins) and add a button to the page.
Add a basic transition:
Make the button grow in size and change colour when you <u>hover</u> over the button.
Add a transition triggered by JavaScript:
In your CSS, create a <u>class</u> in which you **set a transform to rotate 3 full rotations (i.e. 360deg x 3) and set the scale so that the shape will change size** when the transition is applied.
Set the transition property on the shape (remember: this will animate the change when the transition is applied).
In your JS, add a click event handler for the button. When the button is clicked on, add the CSS class (from step 3a) to your shape.

Zip up your files and submit on Blackboard. This is an individual lab. Name your ZIP file in the format:

HTML-Lab7-JohnDoe.zip
